Mathematical Proficiency
as defined by the California Framework (2006)

Conceptual Understanding

DOING MATH

Problem Solving

Procedural Skills
Problem Solving

Use addition and subtraction within 100 to solve one- and two-step word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem. (2.OA.1)
Develop Conceptual Understandings

★ Solve addition and subtraction word problems, and add and subtract within 10, e.g., by using objects or drawings to represent the problem. (K.OA.2)

★ Add and subtract within 1000, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method. Understand that in adding or subtracting three-digit numbers, one adds or subtracts hundreds and hundreds, tens and tens, ones and ones; and sometimes it is necessary to compose or decompose tens or hundreds. (2NBT.7)
Emphasis on Fluency

☆ **Fluently** add and subtract within 20 using mental strategies. By the end of Grade 2, know from memory all sums of two one-digit numbers. (2.OA.2)

☆ **Fluently** add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction. (2.NBT.5)
Common Core State Standards for Mathematics

Two Types of Standards:

- **Mathematical Practices**
  (recurring throughout the grades)

- **Mathematical Content**
  (different at each grade level)
Standards for Mathematical Practice

Describe ways students engage with the subject matter throughout the elementary, middle and high school years

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.
Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Overarching habits of mind of a productive mathematical thinker:

- Reasoning and explaining
- Modeling and using tools
- Seeing structure and generalizing
- Overarching habits of mind of a productive mathematical thinker.

Standards for Mathematical Practice

Understanding expectations provide connections between the Mathematical Content Standards and the Mathematical Practices Standards

- **Understand** that each successive number name refers to a quantity that is one larger. (K.CC.4c)

- **Understand** the meaning of the equal sign…(1.OA.1)

- **Understand** that the three digits of a three-digit number represent amounts of hundreds, tens and ones…(2.NBT.1)
Standards for Mathematical Practice

“The Standards for Mathematical Practices describe... expertise that mathematics educators at all levels should seek to develop in their students.”

Activity: Read the Standards for Mathematical Practice (pp. 1–2) and then discuss with your neighbor:

- Which standards might be familiar or unfamiliar to K–2 teachers? Why?
- Do you currently develop similar mathematical expertise in your students? How?
- How might these standards impact your teaching?
Grade K Overview

Counting and Cardinality
- Know number names and the count sequence.
- Count to tell the number of objects.
- Compare numbers.

Operations and Algebraic Thinking
- Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from.

Number and Operations in Base Ten
- Work with numbers 11–19 to gain foundations for place value.

Measurement and Data
- Describe and compare measurable attributes.
- Classify objects and count the number of objects in categories.

Geometry
- Identify and describe shapes.
- Analyze, compare, create, and compose shapes.

Mathematical Practices
1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.
Standards for Mathematical Content
How the grade level standards are organized

Grade K
Counting and Cardinality

Know number names and the count sequence.
1. Count to 100 by ones and by tens.
2. Count forward beginning from a given number within the known sequence (instead of having to begin at 1).
3. Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).

Count to tell the number of objects.
4. Understand the relationship between numbers and quantities; connect counting to cardinality.
   a. When counting objects, say the number names in the standard order, pairing each object with one and only one number name and each number name with one and only one object.
   b. Understand that the last number name said tells the number of objects counted. The number of objects is the same regardless of their arrangement or the order in which they were counted.
   c. Understand that each successive number name refers to a quantity that is one larger.
5. Count to answer “how many?” questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration, given a number from 1–20, count out that many objects.

Compare numbers.
6. Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies.
7. Compare two numbers between 1 and 10 presented as written numerals.
## CCSS Domains K–5

Emphasis on Fluency

☆ **Fluently** add and subtract within 20 using mental strategies. By the end of Grade 2, know from memory all sums of two one-digit numbers. (2.OA.2)

☆ **Fluently** add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction. (2.NBT.5)
California Additions

Look through the next few pages of your standards document (through page 11). Locate and read other examples of “California Additions” from grades K–2.

Share with a neighbor how these additions might help to maintain the rigor of the 1997 California standards at these grades?
# CCSS Grades K–2

Kindergarten CCSS

ACTIVITY

Read the K.CC standards (p. 4).
Then discuss at your table:

- Standard K.CC.6 calls for students to compare groups of objects by using “matching and counting strategies”. How do these strategies help students understand the concept?
- What are some examples of connections with the Mathematical Practices Standards?
- How might these standards be familiar or unfamiliar to kindergarten teachers?
CCSS Grades K–2
ACTIVITY (45 minutes)

Everyone: Read standards K.CC
Group 1: Read standards K–2.OA
Group 2: Read standards K–2.NBT

At your table:

- Discuss how the standards develop addition and subtraction across K–2? Identify a few benchmarks at each grade.
- Identify and discuss the use of various strategies in the standards (e.g., in standards 1.OA.6 and 1.NBT.4).
- The standards do not call for students to use the standard algorithms at these grades? Discuss why.
- How might these standards be familiar or unfamiliar to teachers?
How are the 1997 CA Standards and the Common Core State Standards similar or different?

**ACTIVITY**

- Read these standards from grades K-2.
- At your table discuss how the CCSS might affect the way you teach?
- Create a sample problem for 2.OA.1 and identify the Mathematical Practices standards that are supported.
### Table 1. Common addition and subtraction situations.

<table>
<thead>

Common Core State Standards Resources

Information and frequently asked questions about the new academic content standards adopted by the State Board of Education on August 2, 2010.

The Common Core State Standards (CCSS) were developed through a state-led initiative to establish consistent and clear education standards for English-language arts and mathematics that would better prepare students for success in college, career, and the competitive global economy. The California State Board of Education (SBE) adopted the standards on August 2, 2010. To learn more about the adoption process, click here.

Common Core State Standards

- **Common Core State Standards for English-Language Arts and Literacy in History/Social Studies, Science and Technical Subjects** (PDF; Outside Source)
  The CCSS adopted by the California SBE on August 2, 2010.

- **Common Core State Standards for Mathematics** (PDF; Outside Source)
  The CCSS adopted by the California SBE on August 2, 2010.

- **Common Core State Standards Initiative** (Outside Source)
  The multi-state CCSS released on June 2, 2010. Includes information about the standards, FAQ, and the appendices to the standards.

- **Superintendent’s Supplemental Instructional Materials Review**
  The State Superintendent of Public Instruction’s initiative to improve review of instructional materials.
CCSSO Mathematics CCSS

Tools and resources primarily developed by Council of Chief State School Officers (CCSSO) and the lead writers of the standards to help states as they implement the Common Core State Standards Mathematics.

- Progression Documents for the CCSS Mathematics Standards (Outside Source)
  Narrative documents describing the progression of a topic across a number of grade levels, informed both by research on children’s cognitive development and by the logical structure of mathematics.

- Hyperlinked Version of the Mathematics Standards (Outside Source)
  A version of the math standards that has hyperlinks within the document.

- Visual Depiction of the Mathematical Practices (Outside Source)
  This visual displays some higher-order structure to the Standards for Mathematical Practice.

- Mathematics Lead Writer Bill McCallum’s Blog (Outside Source)
  CCSS Mathematics lead writer, Bill McCallum, provides information regarding implementation projects related to the CCSS for mathematics.

Common Core State Standards
National Governors Association & Council of Chief State School Officers
Description
The Common Core State Standards Initiative is a state-led effort coordinated by the National Governors Association Center for Best Practices (NGA Center) and the Council of Chief State School Officers (CCSSO). The standards were developed in collaboration with teachers, school administrators, and experts, to provide a clear and consistent framework to prepare our children for college and the workforce. California adopted the Common Cor...
