

HCDE GUEST

You may notice that a new SSID has appeared in your building named "HCDE GUEST". This network has been added to your school in order to provide wireless access to your students and any guests that visit. This wireless network has been setup to provide this access yet prevent it from interfering with your normal wireless network. The guest network is setup so that it only allows a portion of your school's total bandwidth to be utilized and restricts access to any internal network resources.

This network should not be utilized by staff members, except in the case of cell phones, personal computers or other personal devices. Any device that stays in the building (i.e. laptop cart, iPad cart, etc.) should stay on HCDE RADIUS.

The password for HCDE GUEST is: hcdeguest

If you have any issues connecting to or using this network, please contact help desk.
